- 5.1.2(b) DPW 303(d) Commercial Inventory (Fixed Facilities)**
- 5.1.3 (a) AWM Updated Commercial Inventory**
- 5.1.3 (b) AWM Updated 303(d) Commercial Inventory**
- 5.1.4 (a) Updated Mobile Business Inventory**
- 5.1.4 (b) Updated 303(d) Mobile Business Inventory**

5.1 Inventory Pretext

Each of the inventories contained in this attachment consists of two parts. First, “part a” provides listing of facilities or sources along with basic supporting information required by the Permit (location, business type, etc.). It also includes a YES / NO designation as to whether or not the facility is considered to potentially discharge to a 303(d)-listed water body. “Part b” provides a more detailed delineation of these potential relationships, the results of which are based on Geographic Information System (GIS) analysis conducted in August-September 2012 utilizing the SWRCB’s 2010 303(d) listing. In some cases, it contains multiple records for a single facility, i.e., one corresponding to each pollutant for which a potential relationship was identified. Since the results presented in “part a” have not been reconciled with those of the “part b” analysis, they may differ in some places. For example, a facility may be listed in “part a” as not potentially contributing to any 303(d) impairment, but “part b” may show that it does. In such cases, the “part a” result should be considered to be incorrect.

For each of nine pollutant categories considered, a source potential was first assigned to each facility or site. Each assignment was based on the facility type unless other site-specific information or inspection results were available. In this case, the original designation may have been modified to reflect the actual operations or characteristics of the source. Once a facility was determined to be a potential source of any pollutant, its location was then compared to existing 303(d) listed water bodies using GIS. GIS shape-files of water bodies and streams from the Department of Water Resources were related to the table of pollutants using a water body identification number. The National Hydrographic Dataset hydrography network was used to identify tributary water bodies.

This analysis allowed a determination of whether or not a potential linkage exists between the source and any existing impairment. Either of two types of potential linkage may be indicated. If a facility lies within 200 feet of a 303(d) listed water body or tributary, it was classified as TIER 1. If it lies within the watershed, but more than 200 feet from a water body or tributary, it was classified as TIER 2. These rankings allow a tentative determination of relative risk, which can be considered by staff in prioritizing efforts.

Map scale exercises are approximate, and results should not be interpreted as accurate descriptions of the actual potential for a facility to discharge pollutants to a specific location or water body.

UPDATES TO PROGRAM DOCUMENTATION

Contents

- 5.2.1 AWM Stormwater Annual Review
- 5.2.2 AWM Water Quality Inspection Compliance Form
- 5.2.3 AWM Stormwater Knowledge and Assessment Survey

Stormwater Annual Review Guidelines

Why: *“Only rain in the storm drain.”* An annual review helps to protect water resources and improve water quality. It ensures that stormwater (rain) leaves your property unpolluted or clean. And it ensures that non-stormwater such as irrigation runoff or animal wash water does not leave your property. An Annual Review is required by regulation.

What: An annual review is your examination of your facility and operations.

When: To be most effective, the annual review should be conducted just prior to the rainy season (November 11 through April 30). Scheduling the review on your calendar can be a helpful reminder.

In addition, periodic inspections throughout the rainy season, particularly just prior to and during a rain event, can help protect water quality. Visual observation during the first hour of a rain event can reveal problem areas and possible pollutants leaving your site.

How: Take a look at all areas of your property and all activities taking place while keeping pollution prevention in mind.
Make a record of what you reviewed and any problems you may have found. Use the checklist on the other side if you wish or make your own record.

Keep the record of your review at your site. If requested, submit the review record by any of the following methods:

Return in person or mail to:

Ag Water Quality Program
Department of Agriculture, Weights and Measures
County of San Diego
9325 Hazard Way, Suite 100
San Diego, CA 92123

Fax to:

Attention: Ag Water Quality Program
858-467-9277

E-mail to your inspector at: _____

Any Questions: You may contact your inspector or the Agricultural Water Quality Program at 858-694-8980.

Stormwater Knowledge Assessment
Ag Water Quality
AWM

The Stormwater Knowledge Assessment (SKA) score is a tool to help determine Ag Water Quality (AWQ) program effectiveness. At inspected facilities the facility manager/responsible party's level of stormwater knowledge will be scored. The knowledge assessment ratings were designed to gauge awareness of stormwater pollution prevention and implementation of effective BMPs. The scores are determined based on the knowledge in the following areas and answers to these or similar questions:

1. Stormwater, stormdrain system vs. sanitary sewer system.
 - a. What is stormwater, the storm drain system and the sanitary sewer system?
 - b. Where does the water flow?
2. Best Management Practices (BMPs) and good housekeeping.
 - a. What are examples of BMPs at your site?
 - b. What is the best way to store materials to prevent water pollution?
3. Pollutants: nutrients (fertilizers), pesticides, oil/fuel, trash/debris, manure, bacteria, sediment (erosion).
 - a. What are some examples of water pollutants?
 - b. Is sediment a pollutant?
 - c. Is fertilizer a pollutant?
4. Clean Water Beneficial Uses: water supply, recreation (swimming, fishing etc) habitat preservation (fish, wildlife, etc).
 - a. What are the benefits of clean water?
 - b. Who benefits from clean stormwater runoff?
5. Legal requirements for water quality protection: Clean Water Act, NPDES (Municipal Permit), WPO, RWQCB, etc.
 - a. What agencies regulate stormwater?
 - b. What laws, regulations or permits govern stormwater?

The five categories above are scored from zero to two points each for a total score of ten (10) points.
